Re: MSDS Information

To Whom It May Concern:

Allograft tissues distributed by the Musculoskeletal Transplant Foundation do not require a Material Safety Data Sheet (MSDS). The tissue is processed by using human allografts that have been recovered, processed, and packaged in an aseptic environment.

The FDA regulates donated human tissue under FDA regulation 21 CFR Part 1271, Human Cells, Tissues and Cellular Tissue Based Products, also called Good Tissue Practices (GTPs). These regulations outline the requirements for donor screening, infectious disease testing, record keeping, processing, storage, distribution and facility inspections.

MTF allograft donors are screened and tested for infectious diseases according to the applicable regulations of the Food and Drug Administration (FDA), and the Standards of the American Association of Tissue Banks (AATB). MTF is an accredited member of the AATB, and is also accredited by BSI Management Systems for the operation of a Quality Management System which complies with the requirements of ISO 13485.

Please let me know if any additional information is required.

Sincerely,

Joel C. Osborne
Vice President
Quality Assurance and Regulatory Affairs
